NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller’s products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety–related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

Appendix A ........................................................................... 215
Foreword

This standard deals with Industrial Unclad Laminates only. The standards for Industrial Laminates used in circuitry applications are now found in LI-2, which will be published shortly.

Most of the materials in this publication have been developed over a period of years in close coordination with user needs. New and improved grades have been developed to satisfy military and industrial requirements particularly in the aerospace, electronic, and computer industries. In most cases, these standards are the same as military specifications.

NEMA standards for polyester-glass laminates were developed initially as a joint activity with the Society of the Plastics Industry, and a number of standards for laminates for printed circuits and multilayer circuits were developed jointly with the Institute for Interconnecting and Packaging Electronic Circuits (IPC). Both of these groups represent user interest in their memberships.

In addition to cooperative work with the users on mechanical and electrical properties, much work has been carried on for Underwriters Laboratories, Inc. with regard to safety aspects of laminates, particularly the effect of heat, flammability, and ignition from electrical sources.

User comments and recommendations are solicited on all aspects of these standards. They should be addressed to:

Vice President
Engineering Department
National Electrical Manufacturers Association
1300 N. 17th Street
Suite 1752
Rosslyn, VA 22209

This standards publication was developed by the Laminates Section. Section approval of the standard does not necessarily imply that all section members voted for its approval or participated in its development. At the time it was approved, the Group/Section was composed of the following members:

Accurate Plastics, Inc.—Yonkers, New York
Current, Inc.—East Haven, Connecticut
GE Electromaterials—Coshocton, Ohio
Glastic Corporation—Cleveland, Ohio
Haysite Reinforced Plastic Company—Erie, Pennsylvania
ILNorplex, Inc.—Postville, Iowa
Industrial Dielectric, Inc.—Noblesville, Indiana
International Paper Company, Decorative Product Div.—Hampton, South Carolina
Itten Industries—Ashtabula, Ohio
NVF Company—Yorklyn, Delaware
Spaulding Composites Company—Tonawanda, New York

NOTE—Following 2011 reaffirmation, because of a change in the software used to publish this standard, page numbers and other formatting details may differ from NEMA LI-1 1998. No substantive revision was intended.
Section 1
GENERAL

1.1 SCOPE
The Scope of this standards publication includes information concerning the manufacture, testing, and performance of laminated thermosetting products in the form of sheets, rods, and tubes.

A new format for the Industrial Laminate (Unclad) Standard has been established in which the requirements for the physical and electrical properties of the individual NEMA Grades have been consolidated and placed on individual specification sheets. With this format, all of the information on an individual material will be found in one place.

1.2 REFERENCED STANDARDS
The titles of standards to which reference is made in this publication are as follows. Copies are available from the sources indicated.

American Society for Testing and Materials
1916 Race Street
Philadelphia, PA 19103

D 150-87 Tests for A-C Loss Characteristics and Dielectric Constant (Permittivity) of Solid Electrical Insulating Materials
D 229-86 Testing Rigid Sheet and Plate Materials Used for Electrical Insulation
D 256-88 Test for Impact Resistance of Plastics and Electrical Insulating Materials
D 257-78 (R 1983) Test for D-C Resistance or Conductance of Insulating Materials
D 348-89 Testing Laminated Tubes Used for Electrical Insulation
D 349-87 Testing Laminated Round Rods Used for Electrical Insulation
D 459-84 Tests for High-Voltage, Low-Current Arc Resistance of Solid Electrical Insulating Materials
D 570-81 (R 1988) Test for Water Absorption of Plastics
D 621-64 (R 1988) Test for Deformation of Plastics Under Load
D 709-87 Specifications for Laminated Thermosetting Materials
D 790-86 Test for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulation Materials
D 1180-57 (R 1978) Test for Bursting Strength of Round Rigid Plastic Tubing
D 2303-85 Test for Liquid-Contaminant, Inclined-Plane tracking and Erosion of Insulating Materials

Institute of Electrical and Electronics Engineers
445 Hoes Lane
Piscataway, NJ 08855-1331

1-1986.1 General Principles for Temperature Limits in the Ratings of Electric Equipment and for the Evaluation of Electric Insulation
